Symbio Enterprise

Up to 5 Facilities, 400 + Units, 6 Months Support

Symbio Enterprise includes all of the features found in Symbio Standard and Symbio Professional, and is designed to manage larger storage operations and multiple facilities. Symbio Enterprise is a networkable system which allows multiple users to access and operate the software at the same time via LAN or WAN. Companies can set up a secured network that allows access to the central database via a VPN (Client Licenses for additional PC users will need to be purchased separately). Symbio Enterprise includes ownership settings, which allows the software to manage different types of facility ownership such as corporations, partnerships and private ownership. Because of this, Symbio Enterprise can also be used as a property management solution, i.e., to manage other self storage facilities.
